A NEW ERA
of
Data Analysis

Executive Summary:

VantageCrypto is a data & data analysis company. We have been collecting valuable non-persistent data-sets from major exchanges for years. We seek to leverage this specialized data to better understand and predict market behavior

We seek to change the way that API data is bought and sold. We believe in **pricing transparency** and **data subscription flexibility**

Our data analytics revolves around our signaling platform where we offer the ability to perform **brute force back tests of any data** and to provide a new innovative way of sharing and applying crowd sourced analytics

See our data @ <https://coinmarketflow.com>

Problem

Historical Order Flow / Order Book data for crypto markets is hard to come by

Vantage Signals needs to incentivize its users to perform as much deep analytics as possible

Vantage Signals dataset is limited to what is natively available with VantageCrypto data sets

Ocean Protocol needs to continue to grow their projects scope, data, staking, consumption and tangible adoption

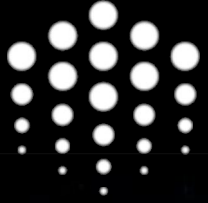

Solution

Make an array of Order Flow and Order Book data available on the OP Marketplace

Incentivize creating and sharing deep analytics by monetizing the dataset and making it profitable

Endlessly expand Vantage Signals analytics scope by integrating OP Marketplace data-sets

Expand data offerings on global market with quality data sets. Extend real world integration and usage that generates new data consumers, publishers and stakers

ocean

Value Proposition:

VantageCrypto sees strategic value in publishing some of our elusive and exclusive dataset to the Ocean Protocol marketplace. This effort brings value to the marketplace by expanding its value-add content as well as promoting brand and data awareness for VantageCrypto

The Vantage Signals platform seeks to lead data analysis for crypto markets and beyond. The OP market offers us interface to endless new data-sets that our users can analyze along with monetizing their processed data

The Signals platform expands the OCEAN network with tangible interactive users that continue to generate and publish new data and stake OCEAN

Milestones & Timeline

1. List a few of **Vantage data-sets on OP MarketPlace**
2. Launch **"Vantage Data Markets"** Powered by Ocean Protocol (fork)
3. **Integrate** "Vantage Data Markets" into Vantage Signals
4. Introduce Signals platform user ability to **share & stake data offerings** of brute force back test analytics (CSV's)
5. Launch ability to **"Import & Analyze"** select MarketPlace data on the Signals platform
6. Launch **Indicator Workshop** to ingest and test almost any Marketplace data
7. Implement **"Analytics on Demand"**
8. Implement **"Compute to data"**

*Initial Projections | actual timeline may change based on final requirements and resources | **Can expedite with proper funding**

Ocean Marketplace

Adding to the marketplace content

- Order book data for major assets
- Order flow data for major assets
- Buy API Data Subscriptions
- Monetize Brute Force Analytics
- Monetize real-time signaling

A new Marketplace Fork

Buy Vantage Data with OCEAN

- Here our data is for sale via OCEAN/VDT's and in a form our API Subscription interface doesn't offer

Introducing Ocean Signals

- Users can buy select data from the integrated OP marketplace and immediately use it in an indicator and start back-testing

Indicator Workshop

- Users can purchase any data from the OP marketplace, parse fields and create an indicator for it and start back-testing it

Compute to Data Environment

- Users can request a compute job to generate and publish a report for them, the data doesn't exist until its funded and executed
